IOS Instructions

1. What you need
　　　- An IOS Device (iPhone, iPod Touch, iPad, etc) (if you don't have one you can use the simulator, however the camera feature will not be usable).
　　　- A Mac computer running the latest version of XCode
　　　- A Lightning Cable

2. Open the folder '/mobile/ios/mobile.xcodeproj' in XCode

3. Unlock your device and plug it into your computer

4. Select the device from the dropdown menu labeled 'Generic IOS Device'
　　　-If you are using a simulator, select the simulated device you would like

5. Click the 'Play' button to build the app on your device

6. Play around!

Notes:

　　　The app depends on a connection to your Google Drive or DropBox account. In order to set this up, please visit https://nectari.me and click on the 'Cloud Services' tab, then click on the 'Connect Now' button underneath your chosen cloud service. This will open a new window which will ask for authorization on your account. This should be done sometime before Step 5.
